

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A flexible shaft, comprising:
 - a flexible, elongated outer sheath;
 - at least one drive shaft disposed within the outer sheath; and
 - a moisture sensor disposed within the outer sheath configured to detect
communicate the presence of moisture within the outer sheath.
2. (Original) The flexible shaft according to claim 1, wherein the outer sheath is autoclavable.
3. (Original) The flexible shaft according to claim 2, wherein the outer sheath includes a fluoropolymer/silicone material.
4. (Original) The flexible shaft according to claim 1, further comprising:
 - a coupling connected to an end of the outer sheath; and
 - a memory unit disposed in the coupling.
5. (Original) The flexible shaft according to claim 4, wherein the memory unit stores data including at least one of serial number data, identification data and usage data.
6. (Original) The flexible shaft according to claim 5, further comprising:
 - a data transfer cable disposed within the outer sheath, wherein the memory unit is logically and electrically connected to the data transfer cable.
7. (Original) The flexible shaft according to claim 1, further comprising:
 - a coupling detachably connected to an end of the outer sheath, the coupling being configured to detachably couple to a surgical attachment.
8. (Original) The flexible shaft according to claim 7, wherein the detachable coupling includes a locking mechanism for detachably coupling to the outer sheath.
9. (Original) The flexible shaft according to claim 8, wherein the locking mechanism includes a flexible strip locking mechanism.
10. (Canceled)
11. (Currently Amended) A flexible shaft, comprising:
 - a flexible, elongated outer sheath;

at least one flexible drive shaft disposed within the outer sheath;
a moisture sensor disposed within the outer sheath configured to
communicate the presence of moisture; and

a coupling connected to a distal end of the outer sheath configured to couple to a surgical attachment.

12. (Original) The flexible shaft according to claim 11, wherein the outer sheath is autoclavable.

13. (Original) The flexible shaft according to claim 12, wherein the outer sheath includes a fluoropolymer/silicone material.

14. (Original) The flexible shaft according to claim 11, wherein the coupling includes a locking mechanism so that the coupling attaches and detaches to the outer sheath.

15. (Currently Amended) The flexible shaft according to claim ~~14~~ 44, wherein the locking mechanism includes a flexible strip locking mechanism.

16. (Original) The flexible shaft according to claim 11, wherein the coupling includes a connection mechanism configured to detachably couple to the surgical attachment.

17. (Canceled)

18. (Canceled)

19. (Currently Amended) The flexible shaft according to claim 11, ~~further comprising:~~
a wherein the moisture sensor is disposed in the coupling and is configured to detect moisture in one of the coupling and the outer sheath.

20. (Previously Presented) The flexible shaft according to claim 11, further comprising:

a memory unit disposed within one of the outer sheath and the coupling, the memory unit configured to store data.

21. (Previously Presented) The flexible shaft according to claim 19, wherein the memory unit stores data including at least one of serial number data, identification data and usage data.

22 to 36. (Canceled)

37. (New) A flexible shaft, comprising:

a flexible, elongated outer sheath;

at least one drive shaft disposed within the outer sheath;
a moisture sensor disposed within the outer sheath configured to detect moisture within the outer sheath; and
a coupling detachably connected to an end of the outer sheath, the coupling being configured to detachably couple to a surgical attachment, wherein the coupling includes an engagement shaft including grooves and a clip having flanges, the flanges being received in longitudinal slits of a hollow engagement member of a surgical attachment, the engagement shaft being received in the clip, the clip engaging the grooves.

38. (New) A flexible shaft, comprising:

a flexible, elongated outer sheath;
at least one flexible drive shaft disposed within the outer sheath; and
a coupling connected to a distal end of the outer sheath configured to couple to a surgical attachment, wherein the coupling includes a connection mechanism configured to detachably couple to the surgical attachment, wherein the connection mechanism includes an engagement shaft having grooves and a clip having flanges, the clip being configured to be received in a hollow engagement member of a surgical attachment, the flanges of the clip configured to engage in longitudinal slits of the hollow engagement member, the clip configured to receive and secure the engagement shaft in the hollow engagement member, and to frictionally engage with the grooves of the engagement shaft.

39. (New) The flexible shaft according to claim 38, wherein the connection mechanism includes a hollow engagement member having longitudinal slits and a clip having flanges, the clip being disposed in the hollow engagement member, flanges of the clip engaging in the longitudinal slits, the clip configured to receive and secure an engagement shaft of a surgical attachment.
